| Team ID       |                                                                                   |
| Project Name  | Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau |
| Maximum Marks |                                                                                   |

A suggested 5-6 minute walkthrough script for recording or presenting the Cosmetic Insights demo. Adjust the wording to your own voice — the structure and timing are the important part.

### 1. Opening (30 seconds)

*[Slide: Title]*

“Hi, we're presenting Cosmetic Insights — a Tableau dashboard that helps cosmetics brand managers and analysts make sense of brand, pricing, ranking, and skin-type data, all in one place.”

### 2. The Problem (45 seconds)

*[Slide: The Problem]*

“Right now, teams like ours persona Priya — a Brand & Category Manager — pull data from scattered spreadsheets every time they need to make a pricing or marketing call. There's no single place that connects brand performance, price, rank, and skin-type suitability, so decisions take longer and are harder to back with evidence.”

### 3. The Solution (45 seconds)

*[Slide: The Solution]*

“Cosmetic Insights solves this with one connected pipeline: we ingest the raw dataset, clean and standardize it, model it in Tableau, and publish an interactive dashboard that anyone on the team can filter and explore — no spreadsheet wrangling required.”

### 4. Live Dashboard Walkthrough (2–3 minutes)

*[Switch to the live Tableau workbook / Tableau Public link]*

- Show the Brand & Pricing Analysis view — point out top and bottom performing brands.
- Apply the Skin-Type filter (e.g., select “Oily”) and show how the view updates instantly.
- Open the Skin-Type Coverage heatmap and call out any visible coverage gap.
- Drill down from a category into individual products.
- Show the price range filter and the calculated Price-to-Rank field flagging an overpriced product.
- Export the current view as a PDF to show the reporting feature.

### 5. Results & Testing (30 seconds)

*[Slide: Results & Testing]*

“We validated this with 6 user-acceptance test cases — all passing — covering upload, filtering, drill-down, export, and role-based access. Development was tracked over two sprints totalling 32 story points, at a velocity of 16 points per sprint.”

### 6. What's Next (20 seconds)

*[Slide: What's Next]*

“Looking ahead, we'd like to add predictive trend indicators, automated alerts on demand shifts, and eventually a mobile-friendly version of the dashboard.”

### 7. Closing (15 seconds)

*[Slide: Thank You]*

“Thanks for watching — the live demo link and our GitHub repository are on screen if you'd like to explore further.”

## Tips

- Keep the live-demo section the longest — it's the most convincing part.
- Have the dashboard already open and filters reset before you start recording.
- If something loads slowly, narrate over it rather than pausing in silence.
- Practice the skin-type filter and drill-down clicks once beforehand so they're smooth on camera.
