

Project Design Phase

Solution Architecture

Date	22 July 2026
Team ID	
Project Name	Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau
Maximum Marks	4 Marks

Solution Architecture

Solution architecture bridges the gap between the business problem — disconnected brand, price, rank, and skin-type data — and the technology solution. For Cosmetic Insights, its goals are to:

- Find the best-fit tool to turn the raw cosmetics dataset into decision-ready insights (Tableau)
- Describe the structure and flow of data from raw file to published dashboard
- Define the core features (brand analysis, skin-type segmentation, interactive filters) and delivery phases
- Provide a clear reference other team members can build the dashboard against

Cosmetic Insights — Architecture & Data Flow

Figure 1: Architecture and data flow of the Cosmetic Insights dashboard

Raw brand, price, rank, and skin-type data is cleaned and structured, modeled into a single connected dataset, then built into interactive views in Tableau Desktop. The finished dashboard is published to Tableau Public, Server, or Cloud, where Brand Managers, Analysts, and Leadership access it through role-based views.
