

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	22 July 2026
Team ID	
Project Name	Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau
Maximum Marks	4 Marks

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate to develop a rich set of creative solutions.

Step 1: Team Gathering, Collaboration and Select the Problem Statement

The team met virtually to review the customer problem statements identified in the Empathize phase. After discussion, the team selected PS-1 — the lack of a single, connected view across brand, price, rank, and skin-type data — as the primary problem statement to solve for, since it has the broadest impact on both the business (Brand/Category Managers) and, indirectly, end consumers (PS-3). Insights that improve data readiness (PS-2) were treated as a supporting workstream feeding into the main dashboard.

Team members involved:

- Maheswar Reddy Kathithatagari — Team Lead
- Vijay Kumar Gogula
- Yagna Mekala
- Joshna Vutupalli
- Guggulla Sree Pranavi

Step 2: Brainstorm, Idea Listing and Grouping

Data Preparation & Preprocessing

- Clean missing/inconsistent brand, price, and rank values
- Standardize skin-type category labels across the dataset
- Create derived fields such as price bands and rank tiers

Brand & Pricing Analysis

- Compare average price vs. rank by brand
- Highlight top and bottom performing brands by category
- Flag products priced above/below their rank-implied value

Skin-Type & Category Insights

- Show product distribution across Dry, Oily, Combination, Normal, Sensitive
- Identify skin-type segments with limited product coverage
- Cross-analyze skin type with price range and category

Dashboard Design & Interactivity

- Interactive filters for brand, category, price range, and skin type
- Drill-down from category summary to individual products
- Executive summary view for leadership + detailed view for analysts

Predictive & Advanced Insights

- Trend lines to anticipate shifts in category or skin-type demand
- Simple recommendation view for underserved segments
- Competitive positioning view once external data is available

Step 3: Idea Prioritization

Ideas from Step 2 were plotted by impact on the problem statement versus feasibility within the project timeline, to decide what the dashboard should deliver first.

HIGH IMPACT / HIGH FEASIBILITY — Do Now • Clean and structure the cosmetics dataset (brand, category, price, rank, skin type) • Build core dashboard: brand performance, price distribution, rank leaders • Add skin-type filters (Dry, Oily, Combination, Normal, Sensitive)	HIGH IMPACT / LOW FEASIBILITY — Do Next • Predictive trend indicators for emerging categories • Automated alerts for sudden shifts in consumer preference • Competitor benchmarking view (needs extra data sourcing)
LOW IMPACT / HIGH FEASIBILITY — Quick Wins • Consistent color themes and brand logos on the dashboard • Downloadable summary reports (PDF/Excel export) • Search bar for quick product/brand lookup	LOW IMPACT / LOW FEASIBILITY — Later • Sentiment analysis of customer reviews • Mobile app version of the dashboard • Multi-language support for the dashboard
