Empathy Map Canvas

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes. It helps the team understand the true problem and the person experiencing it, alongside their goals and challenges.

Cosmetic Insights — Empathy Map

WHO ARE WE EMPATHIZING WITH? - Priya, a Brand & Category Manager at a mid-size cosmetics retail company - She oversees pricing, product mix, and marketing spend across dozens of brands and skin-type segments	
WHAT DO THEY NEED TO DO? - Quickly identify top-performing brands, categories, and price bands - Spot which skin-type segments (Dry, Oily, Combination, Normal, Sensitive) are under- or over-served - Back pricing, restocking, and marketing decisions with evidence, not guesswork - Prepare clear, visual summaries for leadership review meetings	
SAYS "I don't have time to dig through five spreadsheets before every review" "I need to know which products are overpriced for their ranking" "Our competitors seem to be reading the market better than we are"	DOES - Manually compiles brand and pricing reports from multiple sheets each week - Cross-checks competitor pricing informally, by hand - Falls back on past experience and gut feel when data is unclear
SEES - A crowded, fast-moving cosmetics market with new launches every week - Wide variation in product rank across similarly priced items - Competitors targeting specific skin types more precisely	HEARS - Sales teams flagging slow-moving stock - Leadership asking for justification of pricing and campaign spend - Customers complaining a product didn't suit their skin type
THINK AND FEEL - Worried about greenlighting a product or price point that doesn't sell - Frustrated that brand, price, rank, and skin-type data live in separate places - Confident that clearer visibility into trends would sharpen every decision	
PAIN No single, reliable view connecting brand, price, rank, and skin-type performance	GAIN One interactive dashboard to explore brand, price, and skin-type trends together

- Hours lost manually cross-referencing data before every decision
- Risk of mispricing or mis-targeting products due to blind spots

- Faster, evidence-backed pricing and marketing decisions
- Early visibility into underserved skin-type segments and pricing gaps
