

Project Design Phase

Proposed Solution Template

Date	22 July 2026
Team ID	
Project Name	Cosmetic Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau
Maximum Marks	2 Marks

Proposed Solution Template

The project team has filled in the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Brand & Category Managers at cosmetics companies lack a single, connected view of brand, price, rank, and skin-type data, making pricing and marketing decisions slow, manual, and inconsistent.
2.	Idea / Solution description	“Cosmetic Insights” — an interactive Tableau dashboard that ingests and cleans the cosmetics dataset, then visualizes brand performance, pricing trends, and skin-type coverage through filterable, drill-down views for analysts and leadership.
3.	Novelty / Uniqueness	Brings brand, price, rank, and skin-type suitability together in one connected analytical view, instead of the separate spreadsheets most teams rely on; purpose-built filters for skin-type segments rather than generic demographic filters.
4.	Social Impact / Customer Satisfaction	Helps cosmetics brands better match products to skin-type needs, which can improve product fit for end shoppers; reduces guesswork in decisions that affect pricing and availability; saves analysts and managers hours of manual reporting each week.
5.	Business Model (Revenue Model)	Usable as an internal BI tool for cosmetics retailers/manufacturers, or offered as a Tableau-based analytics template/subscription to smaller cosmetics brands that lack an in-house BI team.
6.	Scalability of the Solution	Built on Tableau's live/extract connections, the dashboard can scale to larger datasets — more brands, categories, or regions — or move to a live database connection as data volume grows, without redesigning the core dashboard.
