

Project Design Phase-II

Customer Journey Map — Cosmetic Insights

A customer journey map traces how a key user moves from first recognizing the problem to relying on the solution day-to-day — highlighting their actions, emotions, pain points, and opportunities at each stage.

Persona: Priya — Brand & Category Manager	Awareness	Consideration	Onboarding / Access	Exploration / Usage	Decision-Making	Advocacy / Retention
Stage Goal	Realizes pricing & trend decisions are being made without solid data	Learns a Tableau-based cosmetics dashboard could solve this	Gets access to the dashboard and the underlying dataset	Explores brand, price, rank, and skin-type views	Uses insights to set pricing, stock, and marketing plans	Relies on the dashboard for every review cycle and shares it with peers
Actions	Manually compiles reports from scattered spreadsheets	Talks to the analytics team about a connected dashboard	Receives Tableau Cloud/Server access and a walkthrough	Filters by brand, category, price range, and skin type	Adjusts pricing/stock plans based on dashboard findings	Presents dashboard views in leadership reviews
Touchpoints	Excel sheets, email threads, team meetings	Analytics/BI team, demo session	Tableau Cloud login, onboarding guide	Cosmetic Insights dashboard (Tableau)	Dashboard export/reports, planning meetings	Leadership review meetings, shared dashboard links
Emotions	Frustrated, overwhelmed	Cautiously hopeful	Curious, slightly unsure	Engaged, increasingly confident	Confident, in control	Satisfied, trusts the process
Pain Points	No unified view of brand, price, rank, and skin-type data	Unsure if a new tool will really save time	Learning curve with a new interface	Too many filters at once can feel cluttered	Still needs to double check numbers against source data occasionally	Wants even faster answers as the dataset grows
Opportunities	Show a quick before/after of manual vs. dashboard reporting	Offer a short guided demo focused on her top use cases	Provide a simple onboarding guide and default saved view	Group filters logically and set sensible defaults	Add an export/summary view built for reviews	Add trend alerts so she doesn't have to ask
