

Cosmetic Insights: Navigating Cosmetics Trends and Consumer Behavior with Tableau

Phase 1 – Ideation Phase

1. Brainstorming – Idea Generation

Before finalizing the project direction, the following problem ideas within the cosmetics domain were explored:

- Idea 1: Cosmetics companies lack visibility into how pricing varies across brands and categories, making it hard to position new products competitively.
- Idea 2: Consumers struggle to find products suited to their specific skin type, leading to poor purchase decisions and returns.
- Idea 3: Brand managers can't easily track which skin-type segments are underserved by their product lineup.
- Idea 4 (Selected): Build a unified analytics tool — Cosmetic Insights — that helps stakeholders monitor market trends, pricing, and skin-type coverage in real time, so they can make faster, data-backed decisions.

2. Define Problem Statement

The cosmetics industry generates massive amounts of product and consumer data, but brands and analysts lack an accessible way to visualize pricing trends, brand performance, and skin-type suitability. This makes it difficult to detect shifting consumer preferences, respond to product concerns, or plan future product innovation in a timely way.

3. Empathy Map

Persona: Priya, a Brand Marketing Manager

Says: “I need to know which products are underperforming before it hits sales numbers.”

Thinks: “Am I missing a trend shift before my competitors catch it?”

Does: Manually pulls reports from spreadsheets, checks reviews, waits for monthly summaries.

Feels: Frustrated by delayed insights, anxious about brand reputation during product issues.

Pain Points: No real-time view of pricing/skin-type coverage; slow to spot declining trends (Scenario 1); can't react fast to safety/negative-review issues (Scenario 2).

Gains Wanted: Instant dashboards, predictive alerts, ability to justify decisions with data (Scenario 3).

This completes Phase 1 (Ideation), covering: Brainstorming – Idea Generation, Define Problem Statement, and Empathy Map Canvas.
